

European Entreprises Climate Cup

EECC – the European Enterprises Climate Cup

EECC addresses European small and medium sized enterprises - with a separate office space and up to 250 employees - in 10 EU countries, and is based on the energy savings and the motivation of employees to undertake energy efficient behaviour.

Participants have had one year to implement in their own enterprise measures to reduce their overall energy consumption and to roll-out an in-house campaign to change the behaviour of their employees - the greater the reduction the bigger their chance of winning the competition.

National winners will be the SMEs having adopted the best strategy to reduce their energy consumption, and to stimulate behaviour changes of their employees in each country. The European winners will be the SMEs with the highest savings and the most ambitious saving activities across Europe.

EECC in figures

- 175 small and medium sized companies
- 10 countries
- More than 50% energy savings by EECC finalists

EECC – Jury composed of energy experts, representatives of SMEs and Members of the European Parliament
